High School Rocker Hurdle

Model: HSAH

The aluminum rocker hurdle (invented by AAE Founder John Marzucco) has been often imitated, but never duplicated in its 65+ years in existence. The combination of aluminum frame, Lexan board and UV-stabilized polycarbonate tubes makes our hurdle the most durable ever made. Good thing we sell other products because you won't have to buy AAE hurdles again any time soon.

AAE DISC CAGES

Discus Cage

Model:DC

Although the best ways to throw a discus are debatable, the specifications for discus equipment are not. AAE manufactures its discus cages and discus circles to the exact requirements of NFHS, NCAA or IAAF, which is imperative for throws to be qualified and/or certified for records.

- Aluminum posts are 4" diameter
- Posts feature offset design to prevent discus ricochet
- Aluminum ground sleeves provided for easier post install and removal
- Weather-treated nylon main safety net, 340 psi strength, can be set up and taken down with a simple pulley system
- Rope cleats secure the net in place
- Optional backup net available to keep onlookers at a safer distance from main safety net
- HS model (shown left): (6) posts are 17'-6" in height; main safety net 14' x 54'; backup net 7' x 61'
- College model: (8) posts are 24' in height; main safety net 20' x 63'; backup net 8' x 92'
- International model: (7) posts are 17'-6" in height; main safety net 14' x 63'; backup net 7' x 70'
- See drawings for specifications, installation instructions and plan/layout recommendations
- Proudly Made in the USA & protected by our AAE Warranty

Hammer-Discus Cage

Model:HDC

Any throws area needs to keep disci and hammers inside while keeping outsiders safe. And these hammer-discus cages are designed with the utmost safety in mind. Main safety net is secured on inside of cage, preventing flying implements from striking framework. All cages meet and/or exceed NCAA and/or IAAF rule specifications. Use chart below to decide the best model for your program's needs.

- All models available in single pad or dual pad design (allows for additional depth)
- College Hammer-Discus (CHDC) model meets NCAA rule specifications
- International Hammer-Discus (IHDC) model meets IAAF rule specifications
- Optional Extended Height (EH) model cages meet both NCAA and IAAF
- Aluminum posts have 36" cantilevered offset
- Gate's frame structure features 3/8" thick rubber surface on the complete inside face helping reduce damage to the framework
- Exclusive double-ply net made with 2-1/2" square #820 knotless nylon featuring 800 psi strength used on both the main net and gate nets
- Optional backup net available to be installed outside cage to keep people away from potential "danger zone" near main safety net
- Dual swinging gates give flexibility of narrowing throwing area for hammer event and meets NCAA rule specifications- accommodates right-handed or left-handed throwers
- Hammer Gate Wheel Locks anchor left, right or both gates in position to avoid accidental movement
- EH model cage gates are fabricated of heavy-duty 6" diameter structural aluminum pivot posts with internal structural steel reinforcements and a completely welded 4" square structural aluminum frame
- Special "cable-frame" design on outer vertical gate edge to eliminate the framework in the area most frequently struck
- Includes aluminum ground sleeves with synthetic caps
- See drawings for specifications, installation instructions and plan/layout recommendations
- Proudly Made in the USA & protected by our AAE Warranty
